

Price Builder Bonus Contract

Make the most of your unsold bushels

The Price Builder Bonus Contract is a physical delivery marketing tool that prices equal quantities daily at a price above current market levels. If the relevant futures contract trades or settles at or below the trigger price, any contract bushels not yet priced will remain unpriced. If the relevant futures contract settles at or above the premium price on the pricing date, you will have an additional bushel obligation priced at the premium price. It's one of our suite of marketing alternatives, designed to take some of the worry out of selling your crops.

Who is it for and when is it used?

The Price Builder Bonus Contract can be used at any point during the marketing year and is for producers wanting to leverage their sales to enhance their marketing strategy.

What are the advantages?

- Any bushel quantity with customizable premium price, trigger price, and pricing period
- Prices bushels above the current market daily as long as the relevant futures contract does not trade or settle below the trigger price
- Creates a marketing plan for bushels that would otherwise remain unpriced

What are potential risks / disadvantages?

- Contracted bushels are not guaranteed to be priced
- An additional quantity of Bushels may be required

Entering into the Price Builder Bonus Contract does not result in your opening of a futures / options account or having a futures / options position. This contract employs futures / options solely as a grain pricing mechanism. It is not a futures / options contract or a commodity pooling or trading arrangement.

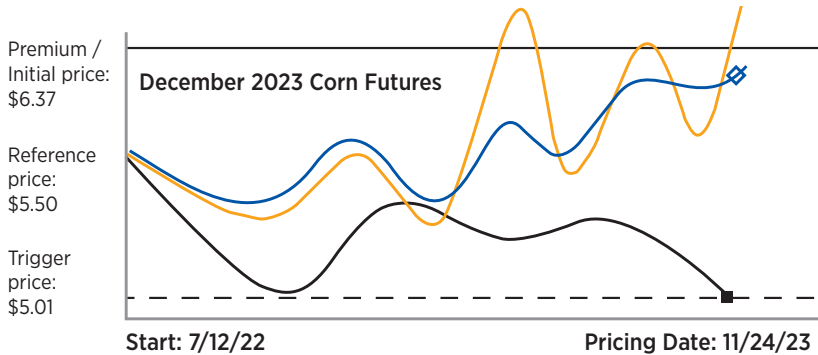

These materials are marketing purposes only and any actual Contract will be subject to agreed-upon written terms and conditions.

Contact your Grain Originator to discuss how the Price Builder Bonus Contract can meet your needs and to learn more about other marketing alternatives that may be available.

More insights = Less worry

In the Price Builder Bonus Contract, an equal quantity of bushels is priced each day. Daily pricing continues until either the pricing date or the trigger price is traded or settled. If the trigger price is reached, the pricing concludes and the potential additional quantity obligation is null/void. If on pricing date, futures close at or above the premium level, the additional quantity obligation will apply.

3 Scenarios	1 st Set of Bushels	2 nd Set of Bushels
#1	\$6.37	-----
#2	Days before trigger are at \$6.37	-----
#3	\$6.37	\$6.37

Example: The selected Price Builder Bonus Contract prices an equal portion of bushels every day at the initial price of \$6.37 as long as the relevant futures have not traded or settled below the trigger. The pricing period runs from 7/19/22 to 11/24/23. If the \$5.01 trigger price is hit, the contract concludes and additional bushel obligation is null/void. If the contract continues to price until pricing date and the futures close above the \$6.37 premium price on 11/24/23, an additional quantity of bushels will be required.

Scenario 1

In the pricing scenario defined by the blue line, you will have all contracted bushels priced at \$6.37 at expiration on 11/24/23. The potential additional bushel obligation is null/void.

Scenario 2

In the pricing scenario defined by the black line, you will have daily quantities priced prior to trigger being hit priced at \$6.37, and remaining bushels would remain unpriced. The potential additional bushel obligation is null/void.

Scenario 3

In the pricing scenario defined by the orange line, you will have all contracted bushels priced at \$6.37 on the pricing date of 11/24/23, and because the market closed above the \$6.37 target on 11/24/22, the additional quantity obligation will apply.
